Frequently Asked Questions

1. What is the source of the commission cost and Other Cost on an order?

The Commission and Other Costs can be determined by your System Setup > System > System Settings > Order Processing > Cost Sources

You can source the Commission Cost Source of Standard, Average, or Order Cost. You can source the Other Cost from Standard, Average, FIFO, or None.

You can also set up a Sales Pricing page to determine the Commission and Other costs.

The Costs tab in the pricing maintenance windows is used to assign other costs such as specials and commissions to a price page. You can also set information for Calculation Values as well as Calculation Methods on this tab.

Job/Contract Pricing allows you to set the Other and Commission cost.

There is also a hidden system setting "**direct_attempt_use_po_cost**" that can impact the way commission cost is determined.

2. What impact does the hidden system setting "direct_attempt_use_po_cost" have on commission cost?

*When this is disabled/OFF, then the system uses the normal method of deriving commission cost, what is noted above.

*When this is enabled/ON, then the system will set Commission Cost to the purchase price of the item from the linked Direct PO

Note: That is a global change; it will impact ALL Direct Ship orders.

3. How is the hidden system setting "direct_attempt_use_po_cost" enabled/disabled?

If you are version 22.2 or higher, you can use the Stored Procedure Executor window within Prophet 21.

The name of the settings are listed below between the single quotes.

If you are on a lower level without the Stored Procedure Executor window, you would need to run the Stored Procedures using SQL Mgt Studio.

```
exec p21_update_system_setting 'direct_attempt_use_po_cost' , 'Y' -- to enable the setting
```

```
exec p21_update_system_setting 'direct_attempt_use_po_cost' , 'N' -- to disable the setting
```
