

P21 Lower Env Refresh

This document describes the steps followed to refresh a lower P21 Env.

 Requires elevated rights to the SQL Server.

 **Warning:** Prior to refreshing the database in P21, please perform a check for the following items that may exist only in the lower environment:

- Users - select * from users where delete_flag = 'N'
- Alerts - select * from alert_implementation where row_status_flag != 705
- Custom APIs - Found on the webserver -custom API folder
- Dynachanges - select * from custom_objects where date_created > "last refresh date"
- User-defined columns - select * from custom_objects_detail where date_created > 'last refresh date' and attribute_name = 'create'
- Crystal reports - compare files in folder: db name CrystalReports
- Import settings - none at this time
- Schedules - none at this time
- Portals - compare files in folder: db name Portals
- Business Rules - compare files in folder: db name BusinessRulesDLL

Be sure to have a backup plan for these items before the refresh and a plan to restore them afterward.

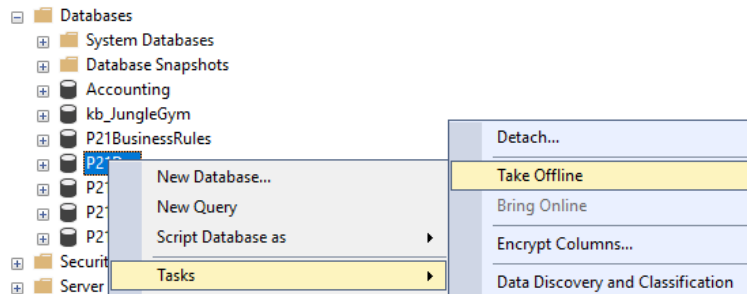

If the database is P21Play, create a Comparato ticket to inform them that the test database will be offline. Notify Comparato when the database is back online. After the refresh, open a ticket with EpicCare to reconnect the B2B seller to P21Play.

IF P21 DEV ensure webapps.allsurfaces.com:8010/CommissionClass/Assignments is working prior & after refresh

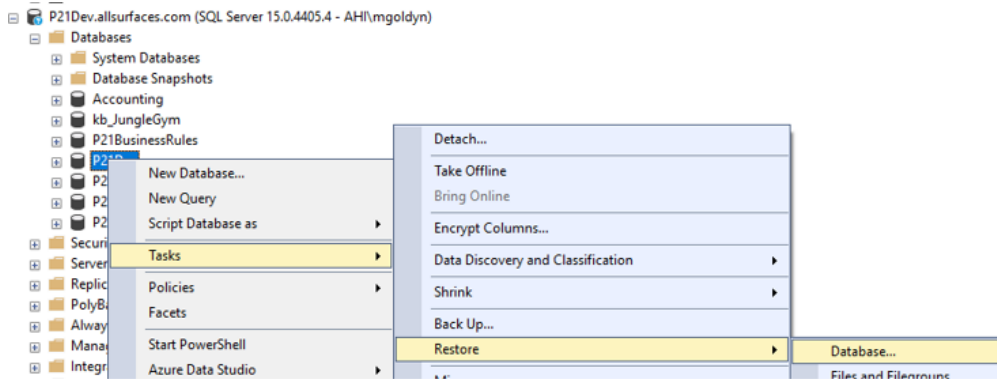

Instructions

1. Using Windows Explorer, copy the latest lower environment backup file from `\\10.0.1.72\asp21db1-dev\ASP21DB1-DEV\“DB Name”\FULL` to the `\\10.0.1.72\BusApps_Backups` folder.
2. Rename the file to `“DB NAME”B4RefreshyyyyMMdd`. Example: `P21PlayB4Refresh20250724.bak`.

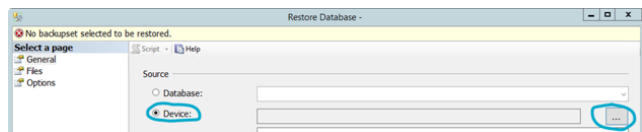

3. Take the Lower Environment database offline by right-clicking on the database and selecting "Take Offline" under Tasks. This will ensure no processes interfere with the restore

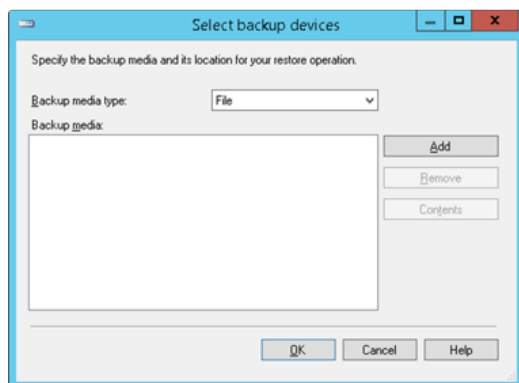

4. In the Object Explorer window, right-click on Databases and choose "Restore Database."

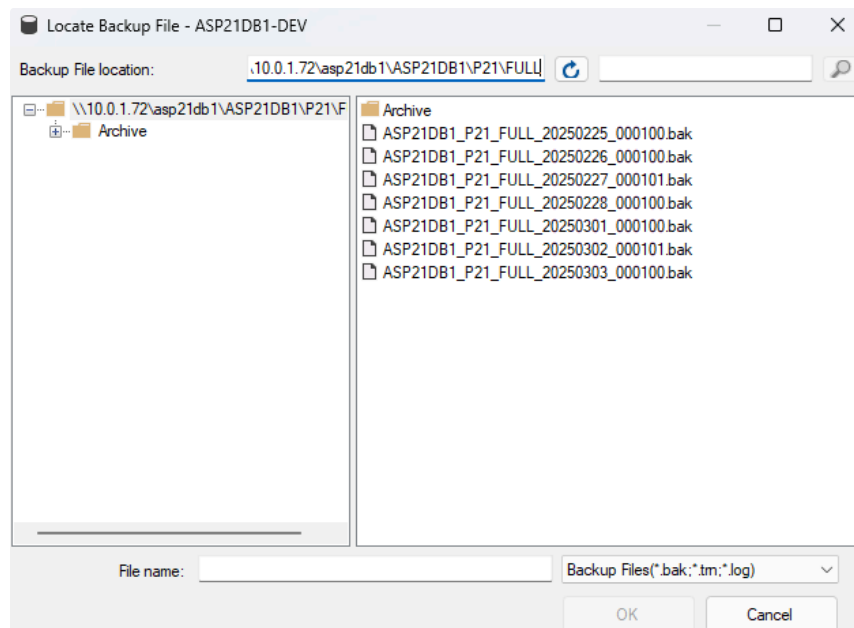

5. The Restore Database window may take a few moments to appear. In the Source section, select Device, click the "..." button.

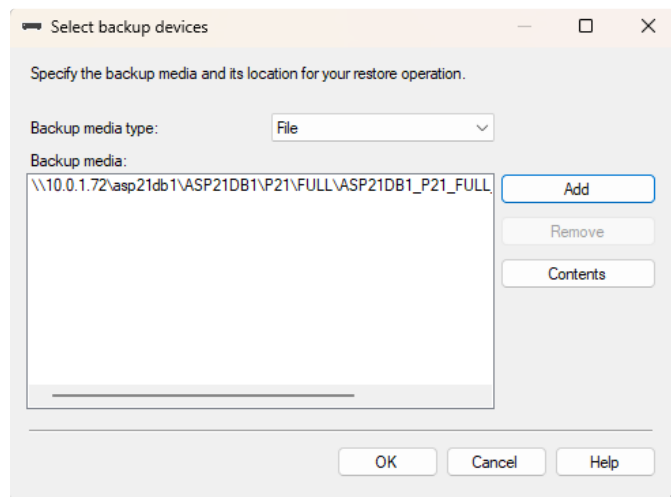

6. Click the Add button on the window that pops up:

7. Select the backup file you wish to restore from and click OK. P21Prod's backup path is: `\\10.0.1.72\asp21db1\ASP21DB1\P21\FULL`. Note that the file will be named with a date in YYYYMMDD format.

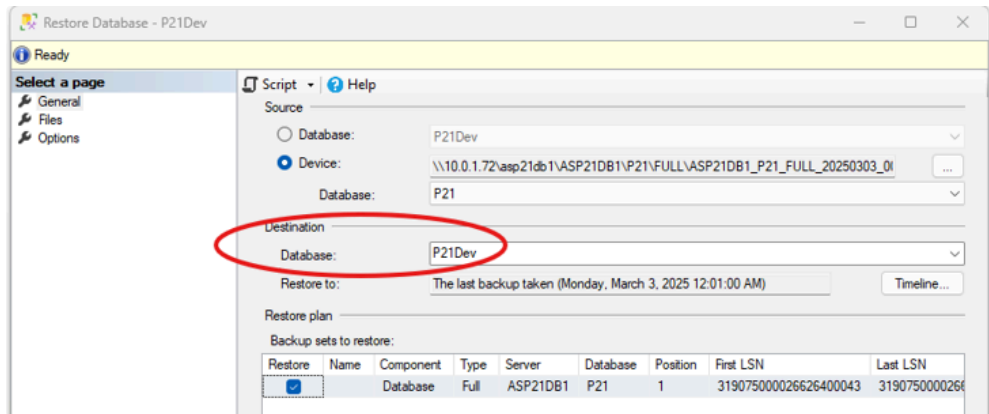

8. Click OK on this window as well.

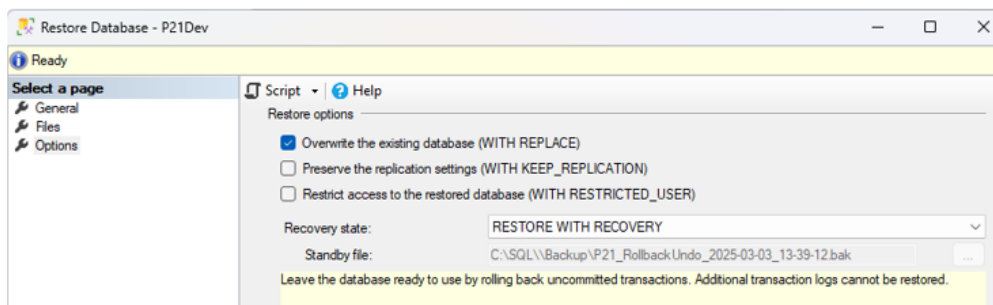

IMPORTANT!!! MAKE SURE THE DESTINATION Database **is not P21Prod**. Be sure to rename!

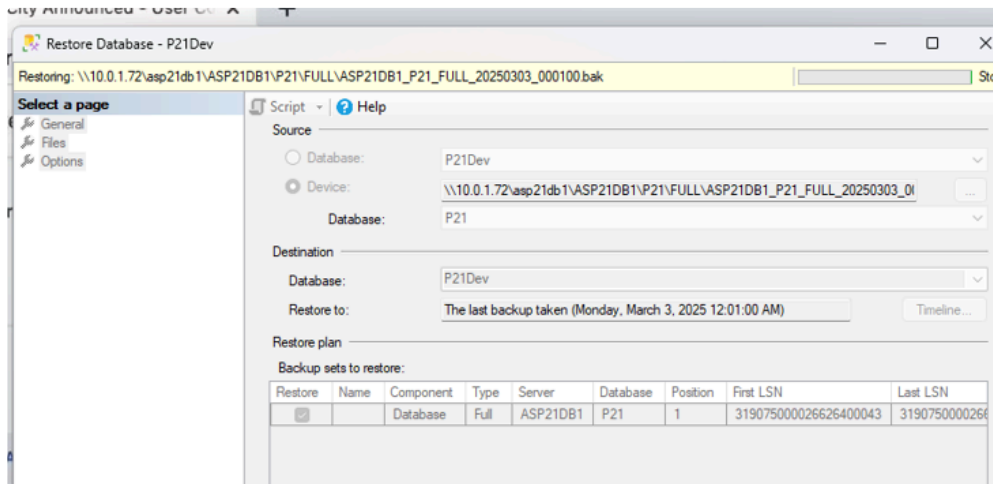

7. Ensure the Destination database in the drop box is the one you wish to restore.

8. Click on Options from the left sidebar, then check Overwrite the existing database (WITH REPLACE).

9. Click OK on the Restore Database window to start the restore process.

10. As of March 2025, the restore will take approximately 25 minutes. After the database restore is completed, execute the Update SQL script for that database. The scripts are saved in the `Bus-Apps\Scripts & Templates\Sanitation Scripts` folder.

11. If necessary, copy the files from following Prod folders to the refreshed database folders:

- BusinessRulesDistribution
- BusinessRulesDLL
- CrystalReports

- d. Logos
 - e. Portals
 - f. Middleware Custom API folder
12. Verify the lower environment was updated correctly on both desktop and web client.
- a. Login into Lower Environment and verify data matches the date of P21Prod
 - b. Company name contains lower Environment in the description.
 - c. For P21 Dev verify is working Dev -Sales Rep to Customer.
 - d. For P21 Play the test EDI import are correct.
 - e. Spot check correct users are enabled or disabled.
 - f. Verify a form will print.
 - g. Verify a Portal is working.
 - h. If necessary, verify P21 Alerts are working

 Highlight important information in a panel like this one. To edit this panel's color or style, select one of the options in the menu.
